

ICRB Releases Multi-Bureau Collaborative Report on COVID-19 Claims Characteristics and Trends

The **Indiana Compensation Rating Bureau (ICRB)**, in collaboration with a number of other workers compensation rating bureaus and NCCI, has released a comprehensive analysis on [COVID-19 data](#).

To better understand the pandemic's impact on the workers compensation (WC) industry, a cross-bureau collaborative effort was made to analyze COVID-19 claims characteristics, including representation from the following WC bureaus: California, Delaware, Indiana, Michigan, Minnesota, New Jersey, North Carolina, Pennsylvania, Wisconsin, and the National Council on Compensation Insurance (NCCI). The analysis does *not* include experience from self-insured employers or denial and expense-only claims.

Claim and loss activity during 2020 as of year-end 2020 varies across jurisdictions, indicative of how the pandemic impacted individual states differently and at varying times. The early evaluation of the emergence of COVID-19 claims includes many uncertainties.

Key findings in the study include:

- In IN, COVID-19 claims represent 9% of total claims counts and 1.6% of incurred losses.
- Indemnity-only claims emerged as a significant share of reported COVID-19 claims.
- In aggregate, COVID-19 claims that remained open have relatively higher case reserves due to the uncertainty of COVID-19 infections, later than average accident dates, and timing of the various waves of the pandemic.
- COVID-19 indemnity claims closed more quickly than non-COVID-19 indemnity claims, partly driven by the large share of indemnity-only claims.
- Despite the higher closure rate, the ratio of paid to paid + case losses on COVID-19 claims is lower when compared with that for non-COVID-19 claims.

Covid-19's Impact on Workers Compensation— A Multi-Bureau Collaboration

45 jurisdictions, representing approximately
\$630M in incurred loss dollars across
80K COVID-19 claims

Indemnity-only claims emerged as a **significant share** of reported COVID-19 claims.

In aggregate, **COVID-19 claims that remained open** have relatively **higher case reserves**.

COVID-19 indemnity claims closed **more quickly** than non-COVID-19 indemnity claims.

The ratio of **paid to paid + case losses** on **COVID-19 claims** is **lower** than that for non-COVID-19 claims.
