Circular 2023-05

To: ICRB Members

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

The ICRB has submitted an item filing, E-1409 which was approved by the Indiana Department of Insurance

PURPOSE

This item revises certain underlying components provided in the methodology used in NCCI's Experience Rating Plan (Plan) to reflect current business and industry needs. The underlying Plan components impacted are:

- Primary/excess loss split point (split point)
- State per claim accident limitation (SAL) and United States Longshore and Harbor Workers' Compensation (USL&HW) per claim accident limitation
- G value
- Credibility parameters underlying calculation of the weight (W) and ballast (B) values
- Discount ratios (D-ratios)

The formulas and general structure of the Plan remain unchanged.

No statewide premium impact will result from the changes in this item.

For further details please see the Circular below.

Sincerely,

Paul E. Keathley, CAWC

Interim President

FILING MEMORANDUM

ITEM E-1409— ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

PURPOSE

This item revises certain underlying components provided in the methodology used in NCCI's Experience Rating Plan (Plan) to reflect current business and industry needs. The underlying Plan components impacted are:

- Primary/excess loss split point (split point)
- State per claim accident limitation (SAL) and United States Longshore and Harbor Workers' Compensation (USL&HW) per claim accident limitation
- G value
- Credibility parameters underlying calculation of the weight (W) and ballast (B) values
- Discount ratios (D-ratios)

The formulas and general structure of the Plan remain unchanged.

BACKGROUND

The experience rating modification is intended to predict an employer's *future* loss experience using its *historical* loss experience. For example, an experience rating modification of 1.20 is a prediction that the employer's future loss experience will be 20% worse than the average employer in the same classification. The experience rating modification is intended to reflect the employer's past loss experience only to the extent that it is considered predictive of future loss experience. The weight given to actual losses in the experience rating modification calculation is called credibility; as the size of the employer increases, credibility also increases.

NCCI periodically evaluates Plan methodology and performance. During the latest review, NCCI identified some opportunities to improve Plan performance, with revisions that will result in:

- A more accurate and predictive experience rating modification
- Experience rating modifications that reflect a more equitable determination of primary and excess losses across states with varying cost levels
- More comparable Plan performance in states with claim costs that vary significantly from the countrywide average
- Experience rating modifications less sensitive to large outlier claims without sacrificing predictive accuracy
- More consistent calculation of each employer's expected claim count, which is expected to result in more appropriate credibility being assigned to each employer's loss experience
- Recalibrated credibility parameters underlying the weight and ballast values to increase equity across employers
- The elimination of complex calculations where no value is added

The following underlying components are impacted by the enhanced Plan.

FILING MEMORANDUM

ITEME-1409— ENHANCEMENTTONCCI'SEXPERIENCERATINGPLANMETHODOLOGY

Split Point

The primary/excess loss split point divides the losses from each historical claim into two layers: primary losses (those beneath the split point) and excess losses (those above the split point). For example, if the split point is \$15,000, a claim totaling \$50,000 would contribute \$15,000 to the primary layer and \$35,000 to the excess layer. Primary losses receive a greater weight than excess losses in the experience rating modification formula. Because of this, primary losses have a greater impact on the experience rating modification. The split point is currently a countrywide value (\$18,500) that is updated with each state's annual loss cost/rate filing to reflect changes in countrywide claim costs.

State per Claim Accident Limitation (SAL)

The state per claim accident limitation (SAL) is the maximum dollar amount from any one claim that may impact the experience rating modification. For example, if the SAL is \$200,000, then any claims with incurred losses above that amount will be limited to \$200,000 for the purpose of calculating the experience rating modification. Currently, the SAL is calculated as the state average cost per case times 25. The SAL can also be derived at 10% times the state reference point (SRP), where SRP is calculated as state average cost per case times 250.

The SAL is intended to curtail the impact that extremely large outlier claims have on the experience rating modification, because these dollars are not expected to be predictive of future loss experience beyond a certain point.

The state multiple claim accident limitation is the maximum dollar amount that an accident involving two or more persons may impact the experience rating modification. It is calculated as twice the SAL.

The USL&HW per claim and multiple claim accident limitations are calculated in a similar manner as the state accident limitations and apply to claims subject to the USL&HW Act. These accident limitations are updated with each state's annual loss cost/rate filing.

G Value

The G value represents state average claim severity (in thousands of dollars). Its primary use is in the determination of an employer's expected claim count, which serves as the basis for the credibility assigned to its primary and excess loss experience. The G value is updated with each state's annual loss cost/rate filing.

Credibility Parameters

NCCI's current experience rating modification (M) formula is:

$$M = \frac{A_p + W A_e + (1 - W) E_e + B}{E + B}$$

The enclosed materials are copyrighted materials of the National Council on Compensation Insurance, Inc. ("NCCI"). The use of these materials may be governed by a separate contractual agreement between NCCI and its licensees such as an affiliation agreement between you and NCCI. FILING MEMORANDUM

ITEME-1409— ENHANCEMENTTONCCI'SEXPERIENCERATINGPLANMETHODOLOGY

Where:

- A_p, A_e = Actual Losses (Primary, Excess)
- E_p, E_e = Expected Losses (Primary, Excess)
- E = Total Expected Losses
- W = Weight
- B = Ballast

The weighting value (W) and ballast value (B) influence the degree to which an employer's actual losses impact the experience rating modification. The W and B values are determined by a set of 10 credibility parameters and these parameters have not been updated in over two decades. The current and proposed formulas governing the calculation of W and B are included in Informational Exhibit 1.

Tables of W and B values corresponding to employer size ranges are updated with each state's annual loss cost/rate filing.

Discount Ratio (D-Ratio)

The Discount ratio (D-ratio) is the expected percentage of losses that fall below the split point value and is used to determine the expected excess losses to be used in the experience rating modification calculation. NCCI publishes D-ratios by classification code. D-ratios are updated with each state's annual loss cost/rate filing.

PROPOSAL

This item proposes the following changes to the Plan:

1. **Implement state-specific split points reflecting an average D-ratio of approximately 40% by state.**

Currently, the split point is set at a common level across states where NCCI provides ratemaking services. Because the average D-ratio in a state depends not only on the split point, but also on that state's average claim costs, having a common split point results in an average D-ratio that varies widely across states.

The proposed methodology level-sets the average D-ratio across states to approximately 40% by introducing a state-specific split point, which allows the split point to better reflect each state's average claim costs. As a result, experience rating modifications will reflect a more equitable determination of primary and excess losses across states with varying cost levels.

For example, instead of the current split point value of \$18,500 applying to all states, under the proposed Plan a state with higher-than-average claim severity may have a split point value of \$25,000, while a state with lower-than-average claim severity may have a split point value of \$15,000. The use of state-specific split point values that reflect individual state cost differences is intended to better align across states the weight given to actual employer loss experience in the experience rating modification calculation. In turn, this is expected to produce improved and more comparable Plan performance in states with claim costs that vary significantly from the countrywide average.

FILING MEMORANDUM

ITEME-1409— ENHANCEMENTTONCCI'S EXPERIENCERATINGPLANMETHODOLOGY

Informational Exhibit 2 shows each state's proposed split point value, which was calculated using Workers Compensation Statistical Plan (WCSP) data underlying the 2018 loss cost/rate filing, and trended, based on the anticipated future loss cost/rate filing effective date for each state as provided in the Implementation section of this item.

Average claim costs vary significantly across NCCI states. The experience rating modification applies to premium that is based on manual loss costs/rates. Because loss costs/rates vary by state in accordance with cost differences, it is paramount that the experience rating modification similarly reflects state cost differences to achieve comparable performance across states. Tailoring the split point to reflect these cost differences is a big step towards aligning performance across states and results in a more accurate and predictive experience rating modification compared to applying a countrywide split point uniformly across states.

To keep up with changes in claim costs and preserve alignment with other experience rating parameters, it is anticipated that the split point value will be indexed concurrent with each state's annual loss cost/rate filing based on an estimate of annual severity changes between the average loss date for experience rating modifications in the initial implementation year and the effective year.

2. Revise the calculation of accident limitations to reflect the 95th percentile of lost-time claims.

The state per claim accident limitation (SAL) is used to curtail the impact of large claims on the experience rating modification because large outlier claims are generally not expected to be predictive of future loss experience. The use of a state-level 95th percentile results in an SAL that is expected to impact the largest 5% of lost-time claims. A similar change is proposed for the USL&HW per claim accident limitation to reflect the 95th percentile of lost-time claims reported under USL&HW Act benefits for F-classifications. Note that this change renders the state reference point (SRP) obsolete (the SAL was previously calculated as 10% of SRP).

The new definition of the SAL and USL&HW per claim accident limitation results in lower limits in every state, making experience rating modifications less sensitive to large outlier claims without sacrificing predictive accuracy.

Informational Exhibit 5 demonstrates how the SAL decreases under the new proposed methodology across states, using historical data underlying experience rating modifications effective in 2018. This new methodology is expected to result in an SAL that is not only lower than the current SAL, but also more stable over time.

Note that, unlike the split point, this item does not propose a new SAL value to go along with the updated methodology. Rather, the state per claim accident limitation and USL&HW per claim accident limitation will be calculated under the new methodology in the state's loss cost/rate filing corresponding to the anticipated effective date provided in the Implementation section of this item.

3. Revise the calculation of G to reflect accident limitations and the reduction of medical-only losses, where applicable.

The enclosed materials are copyrighted materials of the National Council on Compensation Insurance, Inc. ("NCCI"). The use of these materials may be governed by a separate contractual agreement between NCCI and its licensees such as an affiliation agreement between you and NCCI. Unless permitted by NCCI, you may not copy, create derivative works (by way of example, create or supplement your own works, databases, software, publications, manuals, or other materials), display, perform, or use the materials, in whole or in part, in any media. Such actions taken by you, or by your direction, may be in violation of federal copyright and other commercial laws. NCCI does not permit or acquiesce such use of its materials. In the event such use is contemplated or desired, please contact NCCI's Legal Department for permission.

FILING MEMORANDUM

ITEM E-1409— ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

G represents state average claim severity (in thousands of dollars). While G currently reflects the unlimited average severity in a state, this item proposes to update the methodology under which G is calculated to reflect accident limitations and the 70% reduction of medical-only losses (per the experience rating adjustment [ERA]), where applicable.

In the calculation of an employer's expected claim count, the employer's expected losses are divided by the G value (average claim severity). Because expected losses already reflect ERA and accident limitations, this change in how G is calculated makes for a more consistent calculation of each employer's expected claim count. In turn, this is expected to result in more appropriate credibility being assigned to each employer's loss experience.

Note that, unlike the split point, this item does not propose a new G value to go along with the updated methodology. Rather, the G value will be calculated under the new methodology in the state's loss cost/rate filing corresponding to the anticipated effective date provided in the Implementation section of this item.

4. Update the credibility parameters underlying the weight and ballast values.

The proposed credibility parameters underlying the weight and ballast values have been recalibrated to increase equity across employers. All other things being equal, the new credibility parameters would increase credibility for larger risks and decrease credibility for smaller risks. However, because of the interaction of the split point change with the credibility change, the combined impact will vary across states and across employers of difference sizes.

Informational Exhibit 1 contains the proposed updates to the values used in calculating the weight and ballast values.

5. Simplify the D-ratio calculation by removing the classification-level weighting adjustment.

NCCI currently produces D-ratios that vary by classification code. D-ratios are first calculated by hazard group (HG) and then adjusted to reflect a classification's share of indemnity and medical pure premium. While the classification-level adjustment adds complexity to the calculation, NCCI's research found that this adjustment does not add value. As such, this item proposes to eliminate the classification-level adjustment, meaning that the D-ratio will vary only by HG and not by classification code.

IMPACT

No statewide premium impact is anticipated from the changes proposed in this item. The overall average experience rating modification in each state is not expected to be impacted by these changes.

Impacts to experience rating modifications at the individual employer level will vary, and may be offset by changes in loss experience and routine updates to rating values. See Informational Exhibit 3 for details on how experience rating modifications can be expected to change. Experience rating modifications are expected to change by less than +/- 5% for most employers. Informational Exhibit 3 provides details for each state.

Overall, the proposed changes to the experience rating modification calculation are expected to produce Plan performance that is both improved and more comparable across states. Informational Exhibit 4 shows

FILING MEMORANDUM

ITEME-1409— ENHANCEMENTTONCCI'SEXPERIENCERATINGPLANMETHODOLOGY

how Plan performance improves on a countrywide basis under the enhanced methodology proposed in this item. Ultimately, this update to the Plan is expected to result in overall improved performance of the Plan and increased equity across individual employers.

IMPLEMENTATION

This item will become effective for experience rating modifications with rating effective dates on and after each state's anticipated loss cost/rate filing effective on and after November 1, 2023. For example, this item will become effective for experience rating modifications with rating effective dates on and after January 1, 2024, for states with loss cost/rate filings that have an anticipated January 1, 2024 effective date. Similarly, this item will become effective for experience rating modifications with rating effective dates on and after July 1, 2024, for states with loss cost/rate filings that have an anticipated July 1, 2024 effective date.

Effective Dates by State

The following chart shows the anticipated effective dates for each state:

State	Anticipated Effective Date*
Alabama	March 1, 2024
Alaska	January 1, 2024
Arizona	January 1, 2024
Arkansas	July 1, 2024
Colorado	January 1, 2024
Connecticut	January 1, 2024
District of Columbia	November 1, 2023
Florida	January 1, 2024
Georgia	March 1, 2024
Hawaii	The effective date will be determined upon regulatory approval of the individual carrier's election to adopt this change.
Idaho	January 1, 2024
Illinois	January 1, 2024
Indiana	January 1, 2024
Iowa	January 1, 2024
Kansas	January 1, 2024

ITEM E-1409—ENHANCEMENT TO NCCI’S EXPERIENCE RATING PLAN METHODOLOGY

**INFORMATIONAL EXHIBIT 1-A PROPOSED
WEIGHT AND BALLAST FORMULAS**

(Applies in: AK, AL, AR, AZ, CT, DC, FL, GA, HI, IA, ID, IL, IN, KS, KY, LA, MD, ME, MO, MS, MT, NE, NH, NM, NV, OK, RI, SC, SD, TN, TX, UT, VA, VT, WV)

The W and B values for each jurisdiction are currently determined by the following formulas:

$$B = \frac{0.1 \frac{E}{G} - 2,750}{\frac{E}{G} - 700}$$

where B is bounded below by 2,500.

E is the employer’s total expected losses and G is the state average severity.

$$C = \frac{0.375 \frac{E}{G} - 150,000}{\frac{E}{G} - 5,100}$$

where

$$C = \frac{0.056 \frac{E}{G} - 2,910}{\frac{E}{G} - 600}$$

and C is bounded below by 60,000.

This filing proposes to update the formulas to be:

$$B = \frac{0.205 \frac{E}{G} - 130,000}{\frac{E}{G} - 4,500}$$

where B is bounded below by 4,600.

$$C = \frac{0.205 \frac{E}{G} - 130,000}{\frac{E}{G} - 4,500}$$

where

$$C = \frac{0.205 \frac{E}{G} - 130,000}{\frac{E}{G} - 4,500}$$

and C is bounded below by 33,000.

These values are proposed to be the same for all jurisdictions, regardless of whether medical-only losses are reduced by 70%. Note that under the proposed formulas, G is the state **limited** average severity.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

**INFORMATIONAL EXHIBIT 2
PROPOSED SPLIT POINT
INDIANA**

A primary/excess loss split point of \$17,500 is proposed to be effective January 1, 2024.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

INFORMATIONAL EXHIBIT 3
IMPACT OF PROPOSED CHANGES ON MODS
INDIANA

This exhibit shows how experience rating modifications (mods) for intrastate employers would differ between the current and proposed Plans. The rating effective date, and thus the underlying experience on which the mods are based, is identical for each mod between the two Plans shown in this exhibit. Therefore, differences in the mods are due purely to the proposed changes in the calculation of the rating values, including the split point, SAL, G value, and the weight and ballast. Additionally, the historical ELRs and D-ratios have been restated under the proposed Plan to account for these changes.

The table below shows the distribution of the difference in the mod in terms of percent of risks, payroll, and pure premium. The mod difference is calculated for each rating as (mod under proposed Plan) – (mod under current Plan). A positive mod difference indicates that the proposed methodology caused the mod to increase, while a negative mod difference indicates that the proposed methodology caused the mod to decrease.

Distribution of Mod Difference From Current to Proposed Plan
Indiana—Intrastate Risks

Mod Difference	Percent of:		
	Risks	Payroll	Pure Premium
Diff < -0.25	0.0%	0.0%	0.0%
-0.25 ≤ Diff < -0.20	0.0%	0.0%	0.0%
-0.20 ≤ Diff < -0.15	0.1%	0.1%	0.1%
-0.15 ≤ Diff < -0.10	0.8%	0.9%	0.9%
-0.10 ≤ Diff < -0.05	2.8%	5.3%	6.5%
-0.05 ≤ Diff < 0.00	10.8%	29.7%	29.5%
Diff = 0.00	10.6%	10.1%	10.4%
0.00 < Diff ≤ 0.05	71.9%	50.4%	49.1%
0.05 < Diff ≤ 0.10	2.2%	2.7%	2.7%
0.10 < Diff ≤ 0.15	0.5%	0.5%	0.5%
0.15 < Diff ≤ 0.20	0.1%	0.1%	0.1%
0.20 < Diff ≤ 0.25	0.0%	0.0%	0.0%
Diff > 0.25	0.0%	0.1%	0.1%

Mod Difference = mod under proposed Plan minus mod under current Plan

Reflects ratings effective 1/1/2018 through 12/31/2018.

Excludes risks that are self-insured or have a large deductible policy.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

**INFORMATIONAL EXHIBIT 3 (CONT'D)
IMPACT OF PROPOSED CHANGES ON MODS
INDIANA**

The chart below shows the distribution of the mod under both the current Plan and the proposed Plan for intrastate risks. The gray bar on the left shows the percent of mods within each group under the current Plan, while the blue bar on the right shows the percent of mods within each group under the proposed Plan.

Reflects ratings effective 1/1/2018 through 12/31/2018.

The Expected Loss Rates (ELRs) underlying these mods have been retrospectively adjusted for both Plans to achieve an average intrastate mod of 0.96.

Excludes risks that are self-insured or have a large deductible policy.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

**INFORMATIONAL EXHIBIT 4
EXPERIENCE RATING PLAN PERFORMANCE COMPARISON**

The chart below demonstrates performance of the Experience Rating Plan (Plan) under both the current and proposed methodology using NCCI's standard quintile test, which can be interpreted as follows:

- Employers are placed into one of five groups (quintiles) based on their experience rating modification (mod), with the employers on the left receiving the lowest mods and the employers on the right receiving the highest mods.
- While the mod is generally based on the experience from the three most recent policies reported in accordance with NCCI's *Statistical Plan for Workers Compensation and Employers Liability Insurance*, this chart is showing the experience that actually emerged from the policy that the mod applies to. For example, a mod effective January 1, 2018 will generally be based on experience from 2014–2016 and applies to policies effective in 2018.
- The five groups on the top half of this chart are shown **before** the application of the mod. The five groups on the bottom half of this chart are shown **after** the application of the mod.
- The top half of this chart reveals that the Plan was generally able to identify the better-than-average and worse-than-average employers. This is because the employers receiving the lowest mods subsequently had the best experience. Likewise, the employers receiving the highest mods subsequently had the worst experience.
- If the Plan were performing at an optimal level, the loss ratios shown on the bottom half of this chart would be 100% for all five groups. Under the current Plan, the loss ratio for the left-most group is notably less than 100%. Under the proposed Plan, this group's loss ratio is corrected to 100%. Additionally, all but the third group's loss ratio are closer to 100%.
- One metric for measuring Plan performance, the quintile test statistic, is calculated as follows:

Quintile metric

$$\frac{\sum_{i=1}^5 LR_i^{After} - 1}{\sum_{i=1}^5 LR_i^{Before} - 1}$$

where: LR_i^{After} is the loss ratio after the application of the mod for quintile i , and LR_i^{Before} is the loss ratio before the application of the mod for quintile i .

The proposed Plan scores **0.003**, an improvement over the current Plan's score of **0.013**.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

INFORMATIONAL EXHIBIT 4 (CONT'D) EXPERIENCE RATING PLAN PERFORMANCE COMPARISON

These charts show the quintiles test on all rated employers for both the current Plan and the proposed Plan.

Reflects ratings effective 1/1/2016 through 12/31/2018.

Quintiles are weighted by rating period expected losses (pure premium).

Loss ratios reflect limited losses and are normalized by state and rating year.

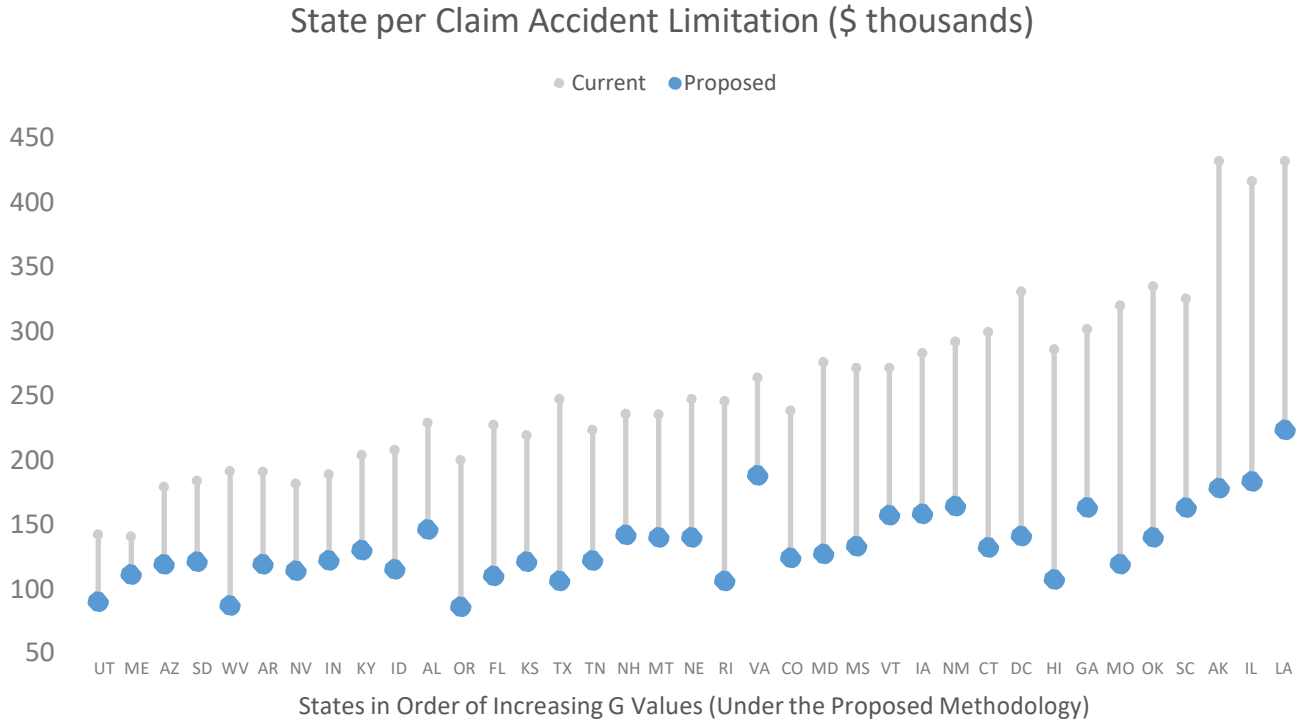

Jurisdictions included: AK, AL, AR, AZ, CO, CT, DC, FL, GA, HI, IA, ID, IL, IN, KS, KY, LA, MA*, MD, ME, MN*, MO, MS, MT, NC*, NE, NH, NM, NV, OK, OR, RI, SC, SD, TN, UT, VA, VT, WI*, WV.

* Included only for interstate ratings. Quintile loss ratios do not include MA, MN, and WI.

ITEM E-1409—ENHANCEMENT TO NCCI'S EXPERIENCE RATING PLAN METHODOLOGY

**INFORMATIONAL EXHIBIT 5
STATE PER CLAIM ACCIDENT LIMITATION (SAL) COMPARISON**
